

Bet Bardají

Data Scientist · Bioinformatics & Computational Data Analysis

Aarhus, Denmark · EU citizen · bardajibet@gmail.com · +34 652 919 807 · [linkedin.com/in/betb320431251](https://www.linkedin.com/in/betb320431251)

PROFILE

Data scientist and engineer with ~3 years of professional experience, proficient in Python and R for data wrangling, statistical analysis, modelling and visualisation of large, complex datasets. Background spanning biology (BSc, Neurobiology & Genetics) and biomedical data science (MSc), with research experience applying machine learning, statistical and CNN models, text mining and clustering to messy, real-world data. Comfortable in interdisciplinary, research-driven and cross-functional settings, and used to translating analytical findings into clear communication for non-technical audiences. Starting an MSc in Bioinformatics at Aarhus University in August 2026, with full working rights in Denmark as an EU citizen, and available for part-time, flexible student-assistant work. Keen to extend my modelling and data-mining experience into bioinformatics and biological network analysis.

PROFESSIONAL EXPERIENCE

Data Engineer

Mar 2024 to Present

Schneider Electric · Barcelona, Spain

- Design and optimise data pipelines and analytical models using Python, SQL and PySpark on Databricks, supporting global reporting and category-level analytics.
- Lead end-to-end delivery of data projects in Agile teams, from requirements gathering and analysis through to production, ensuring controlled, traceable and on-time execution.
- Partner with international business stakeholders across procurement, finance and operations to translate requirements into clear technical logic and structured data solutions.
- Communicate complex technical findings to non-technical audiences through dashboards, visualisations and concise business cases; challenge assumptions constructively when needed.
- Build and maintain data quality, governance and lineage frameworks (GDPR/PII compliance, RLS, approval workflows) used across multiple regions.

Data Scientist Intern

2023 to 2024

Schneider Electric · Barcelona, Spain

- Ran clustering, web scraping and ML experiments to extract insights and structure from large, unstructured datasets.
- Designed deduplication algorithms across global finance databases, improving master data accuracy and cross-supplier reporting.
- Built Tableau dashboards and KPI tracking (incl. SemRush analytics) used by finance and marketing teams.

Associate Researcher

2021 to 2022

Universidad Abierta Interamericana · Buenos Aires, Argentina

- Built and validated prediction models (CNN-based and statistical) on a patents database of thousands of records, exploring new strategies for Parkinson's treatment within the Renin-Angiotensin system.
- Applied text mining and statistical analysis to scientific literature and patent data, structuring biomedical datasets for modelling, work directly analogous to data mining over large textual corpora.
- Collaborated with an international research team, presenting weekly updates and contributing figures and analyses to research publications.

Data Analyst Intern

2020 to 2021

Monash University · Malaysia

- Processed large volumes of biological data and built ML classification/regression models to identify developmental patterns in epilepsy research using zebrafish models.
- Designed experiments, data-collection protocols and visualisations to communicate findings to the research team and support publications.

EDUCATION

MSc in Bioinformatics

Aug 2026 to 2028 (starting)

Aarhus University · Aarhus, Denmark

Interdisciplinary programme combining biology, computer science and statistics for the analysis of large-scale biological data.

MSc in Data Science

2022 to 2023

Nuclio Digital School · Barcelona, Spain

Focus: Machine Learning, Big Data, Advanced Analytics.

KEY SKILLS

Programming	Python (advanced), R, SQL, PySpark, Pandas, NumPy, scikit-learn
Data analysis	Data wrangling & cleaning, statistical analysis, ML (clustering, classification, prediction, CNN), text mining, web scraping
Visualisation	Matplotlib/Seaborn, Tableau, Power BI, dashboards & reporting
Data platform	Databricks, Delta Lake, Azure Data Lake, AWS (Redshift, S3), Synapse, Alteryx
Automation & apps	Power Apps, Power Automate
Dev & DataOps	Git/GitHub, Azure DevOps, CI/CD, Linux/Ubuntu, Docker (basic), Jira, Confluence
Methods	ETL/ELT pipelines, data modelling, REST APIs, research design & validation
Ways of working	Agile/Scrum, interdisciplinary research, cross-functional & client-facing delivery

LANGUAGES

English	C2, full professional proficiency
Spanish / Catalan	Native
Danish	Beginner (currently learning)
German	A2

ADDITIONAL

- Certifications: Johns Hopkins University, Algebra, Mathematical Problem Solving, Mathematical Logic (High Honours); Coursera Master in Clinical Neuropsychology; UB courses in NLP, Emotional Wellbeing, Rare Diseases.
- Awards: High Honours, Johns Hopkins University; Best Research Project ("Epigenetics in monozygotic twins").
- Volunteering: Association of Single Parent Families (2015 to 2020); CorsAvi (2020 to 2021).
